

# Experienced C++ developer

For TriVision, we are looking for an experienced C++ developer

**Do you want to help secure the quality of food products around the globe, and do you have what it takes to continuously deliver the best vision technology solutions and work at the forefront of technological development?**

**Then join TriVision**

TriVision are expanding their development team, responsible for delivering implementation, installation, support and service connected to existing- and future product portfolio.

## Job description

As their new developer, you will become part of a core function in joining the development team.

Your primary focus will be application development as well as application customization and configuration, all in cooperation with the sales team to ensure customer requirements are being formally specified and worked into the execution plan.

As a Developer, you will be involved in the project from start to finish, including software and system design in the beginning and running-in at the end of the project. From time to time, you will take part in their support.

## The job and areas of responsibility:

- Develop and customize applications
- Evaluate customer requirements in order to customize and configure software applications and turnkey solutions to meet the agreed specifications
- Make sure that the application is tested thoroughly before being installed or deployed
- Conduct programming, technical setup, troubleshooting and testing during installation to ensure that our products function optimally in in our customers' existing systems and production lines
- Manage, monitor and track technical issues, risks and/or tasks during installation to ensure that all solution requirements are met before handover
- Test, validate and assure quality to ensure the solution is fully integrated and operational
- Assist remotely when colleagues or partners install our solutions
- Assist on keeping projects on track and evaluate project performance with the rest of the operations and support team
- Assist on support and service tasks across the operations and support team

## Your experiences

- MSc in Computer Science, MSc in Engineering or other relevant background
- Experienced Visual C++ programmer
- Hands-on experience with software design
- Preferably an Image analysis background or experience
- General knowledge and competencies with respect to software design, applications development, and test procedures

## You:

- Have a strong interest in programming and a profound desire to develop yourself and your programming skills
- Take professional pride in delivering high quality software
- Have an analytical mindset with good skills in problem-solving and troubleshooting
- Are helpful, structured, focused, calm and trustworthy team player, that also can work independently
- Have a good understanding of IT so you can quickly adopt new IT packages and techniques
- Are used to work with and meet tight deadlines
- Demonstrates good attention to detail
- Approach every task in a structured manner to ensure task completion and to deliver relevant knowledge-sharing, e.g. through installation reports and documentation
- Take ownership in keeping a high standard in our software development and participate in our continuous strive towards the best possible quality,
- Focus on delivering according to URS and on time, and establish a personal and basic understanding of TriVision, the products, solutions and customers
- Have good communication skills and are fluent in English - both spoken/written
- Might speak Danish, German or another European language

- Either live in Denmark or have a valid work & resident permit for Denmark

### **Working at TriVision**
